"Amino acid sequence of trocarin, a prothrombin activator from
Tropidechis carinatus venom: its structural similarity to coagulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -!- PTM: THE ACTIVATION PEPTIDE IS CLEAVED BY FACTOR IXA (IN THE INTRINSIC PATHWAY), OR BY FACTOR VIIA (IN THE EXTRINSIC PATHWAY).
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY SI.
-!- SIMILARITY: CONTAINS 2 EGF-LIKE DOMAINS.
                                                                                                                                                                                                                                                                           in venom.

--- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-Thr and then Arg-|-Ile bonds in prothrombin to form thrombin.

--- SUBBUNIT: THE THO CHAINS ARE FORMED FROM A SINGLE-CHAIN PRECURSOR AND ARE HELD TOGETHER BY I OR MORE DISULFIDE BONDS.

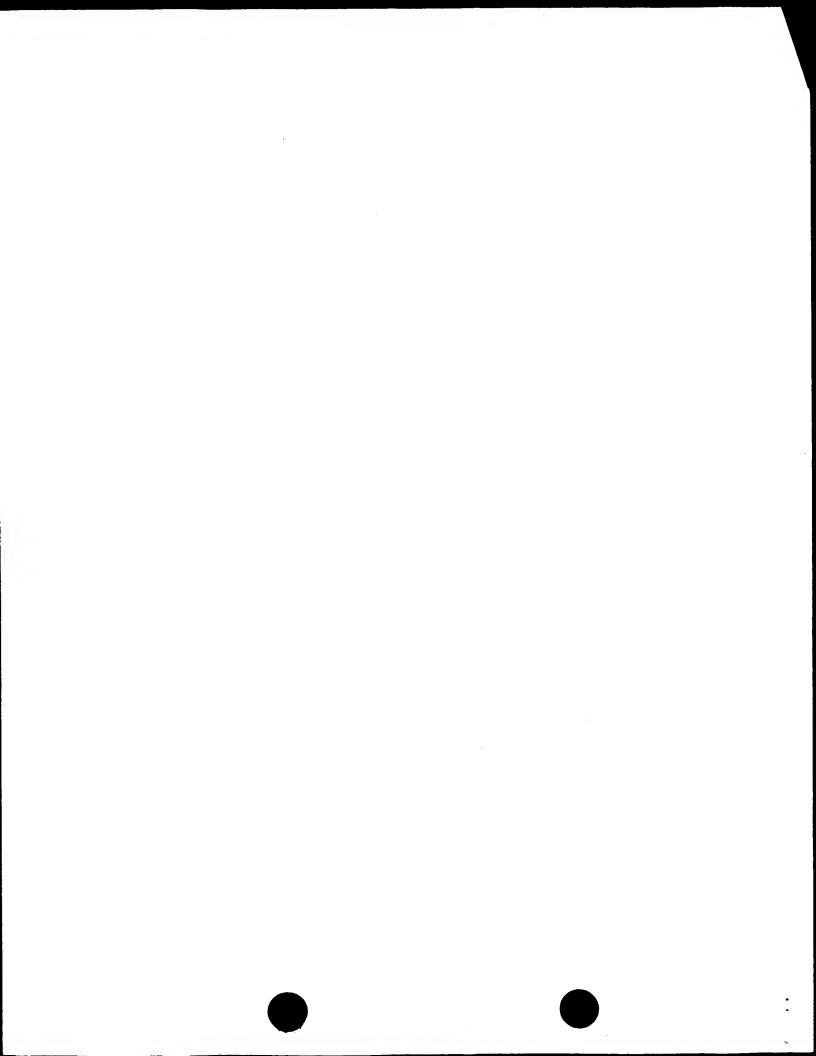

--- PTW: THE VITAMIN K-DEPENDENT, ENZYMATIC CARBOXYLATION OF SOME GLUTAMIC ACID RESIDUES ALLOWS THE MODIFIED PROTEIN TO BIND
                                                                                                                                                                                                 FUNCTION: Factor Xa is a vitamin K-dependent glycoprotein that Converts prothrombin to thrombin in the presence of factor Va, calcium and phospholipid during blood clotting. Acts as a toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GAMMA-CARBOXYGLUTAMIC ACID.

"A comparative study of partial primary structures of the catalytic
region of mammalian protein C.";
Br. J. Haematol. 86:590-600(1994).
-!- FUNCTION: PROTEIN C. IS A VITAMIN K-DEPENDENT SERINE PROTEASE THAT
REGULATES BLOOD COAGULATION BY INACTIVATING FACTORS VA AND VIIIA
IN THE PRESENCE OF CALCIUM IONS AND PHOSPHOLIPIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       335 ArgAspThrHisPhelleThrGlyIleIleSerTrpGlyGluGlyCysAlaArgLysGly 354
